SELVA KUMAR

INTRODUCTION

This C program implements a simple user login and profile management system. Users can register with their name, email, and password, log in using their credentials, view all registered users.

User information is stored in a file named users.exc for permanent storage. The program demonstrates key concepts like file handling, structures, arrays, and basic validation in C.

OBJECTIVE

The objective of this program is to develop a simple user registration and login system using C language that allows users to register with their name, email, and password, log in securely, view all registered users, and save user data permanently using file handling techniques.

WHY C, DSA

- 1) C structures (struct) are used to store user information together (name, email, password).**
- 2) Arrays in C manage multiple users efficiently.**
- 3) File handling in C saves and loads users from a file permanently.**
- 4) String functions help compare emails and passwords during login and registration.**
- 5) DSA concepts like searching and validating user details are used.**

ALGORITHM

- 1. Start the program.**
- 2. Load existing users from the file (users.exc).**
- 3. Show the menu: Register, Login, Show Users, Exit.**
- 4. Take user choice.**
- 5. If Register: Ask for name, email, and password. Check if email already exists. If not, add user and save to file.**
- 6. If Login: Ask for email and password. Validate credentials.**
- 7. If Show Users: Display all registered users.**
- 8. If Exit: End the program.**
- 9. Repeat steps 3–8 until user chooses Exit.**

SOURCE CODE

[HTTPS://ONLINEGDB.COM/GPOAA_APJ](https://onlinegdb.com/GPOAA_APJ)

Output:1.Register

2.Login

3.Show all users

4.Exit

Choose the option:1

Enter the name:mounika

Enter the mail:mouni@gmail.com

Enter the password: mouni

User registered successfully !!!

Choose the option:2

Enter the mail:mouni@gmail.com

Enter the password:mouni

Welcome ,mounika !

Choose the option:3

Name: mounika , mail:mouni@gmail.com

Choose the option:4

Code finished successfully Exit 00 !!!

```
Choose an option: 1
Enter name: mounika
Enter email: mouni@gmail.com
Enter password: mouni
User registered successfully!
```

- ```
1. Register
2. Login
3. Show All Users
4. Exit
```

```
Choose an option: 2
Enter email: mouni@gmail.com
Enter password: mouni
Welcome, mounika!
```

- ```
1. Register
2. Login
3. Show All Users
4. Exit
```

LESSON LEARNT

- 1) Learned to use structures to store user data.**
- 2) Understood file handling for saving and loading users.**
- 3) Practiced string operations for validation.**
- 4) Built a simple menu-driven program.**

THANK YOU!
